

Sanitary and heating solutions

Aesthetics and responsibility for today and tomorrow

A bathroom is not just a plumbing unit. It's an individual living domain. Make this holistic concept a reality for your customers – with sanitary facilities which promote well-being. Down to the tiniest detail – be it the handles of the shower partition, the ideal lighting, or the perfect bath caddy, we help you make your visions a reality. From the modern country house style through to purist designs, right up to the classical bathroom designs, we offer you a spectrum of variation possibilities in colour, design and surfacing in order to create an individual designer bathroom. Our exceptionally fine-pored sanitary ceramics stand out due to their special limescale-repellent surface finish: hygienic, easy to clean, durable. Through the use of rainwater for WC flushing, your customers save valuable drinking water. Moreover, the customised features, which beautifully combine functionality with aesthetics, lend an inviting appeal – the same is true of solutions for kindergartens, barrier-free living and hospitals.

Our product and services portfolio is far above and beyond the standard spectrum offered by traditional distributors. And that goes not just for the quick-turnaround standard products but also for niche and peripheral products, including spare parts. You also benefit from the wealth of expertise and flexibility of our friendly employees who are happy to help you in every situation – from the initial cost estimation to technical advice and exhibition advice, right through to the on-schedule delivery to the destination site. We would also be delighted to provide you with a customs agent in the recipient country. Be it advice or action, you can count on us for all your building project needs: we are at your disposal – also beyond national borders.

The advertisement features a large yellow background with the GC-GRUPPE logo in the top left corner. In the top right corner, the text "Added Value by GC" is displayed next to the logo. A large white rectangular area in the center contains a white square placeholder for an image or text.

The advertisement features a large yellow background with four skydivers in freefall against a blue sky with clouds in the top half. The bottom half is a solid yellow color. The GC-GRUPPE logo is located in the top right corner. The main text "Who stops becoming better stops being good." is centered in the yellow area.

You can count on us.

Your reliable partner for building projects

Expertise, quality and a comprehensive service: The GC Group is an exceptional partner for all aspects of building services engineering. We help you to put your daily business on the right track. We provide you with all you require for the smooth execution of work in the following areas: sanitary, heating, solar, electrical, air conditioning/ventilation, installation, structural and civil engineering. From the planning stage through to the on-schedule delivery to the building site – you receive everything from a single source.

Approximately 15,000 employees in over 1,000 branch offices are at your disposal, enabling us to offer you this comprehensive product and service portfolio with dependable reliability. We handle an extremely diverse range of project sizes worldwide and supply to customers throughout the world on a regular basis.

Electrical installation and air conditioning / ventilation

Full steam ahead with a fresh breeze throughout the house!

When it comes to electricity, there are two primary concerns: skillful installation and clever economisation. Electricity powers a multitude of functions in a home – lighting, kitchen appliances, air conditioning, convenience technology, etc. Electricity also provides security. Nowadays, the technology behind devices which are employed changes rapidly. Housing ventilation, heat recovery and the use of renewable energies must all be taken into consideration. New challenges are presented to electrical installation by home communication systems, smart home technology, security systems, home offices, home cinemas and flat screens. We clarify and help you understand modern building services technologies and present you with a broad range of options.

Give your customers the ability to carry out tasks around the house at the touch of a button. Enhance the security of the building. Design the optimal lighting solution, install a factory-assembled or customised switch cabinet.

We are also happy to advise on matters of data network technology, security, and cable and line routing.

Installation work and civil engineering

These services complete our portfolio.

Installation work should be environmentally friendly and cost-effective. However, good installation work is characterised by an additional factor: it should be virtually invisible. This applies to drinking water filters in the piping of your house for example, to integrated garden irrigation systems, or innovative pipe laying technologies.

One never notices them because they are so reliable. In newly built and renovated properties, the use of reliable and low-maintenance installation technologies is a key advantage and one which yields multiple savings benefits: assembly and maintenance times as well as material requirements are significantly reduced through the use of the correct technologies.

This applies to the drinking water supply, drainage and waste disposal, insulation and fire protection systems, fixation systems, water treatment, roofing technologies, as well as to rainwater usage and irrigation systems.

You can rely on us – and benefit from our specialised expertise in this field.

Our (extensive) product portfolio covers the following areas:

- Sanitary ware (bathroom equipment/wellness)
- Plumbing (connections, fittings and insulation)
- Heating systems / heating elements
- Alternative energies (solar / photovoltaic / heat pumps)
- Fixation systems / tools
- Ventilation / air conditioning
- Electrical installation / cables
- Lighting
- Civil engineering
- Wheelchair accessible solutions / barrier-free washroom solutions
